

Systems Medicine

A 180-hour high school CTE course aligned with the state Systems Medicine framework.

This course offers 1.0 credit toward both lab science and CTE requirements for Graduation.

Medicine is shifting from a reactive disease-care system to a proactive Systems Medicine discipline that holistically optimizes wellness and minimizes disease.

“I learned a lot about the many different factors of health and how it really went far beyond what I had thought before.”

- Systems Medicine high school student

The Systems Medicine course prepares students for the future of health by introducing them to innovative systems approaches and the novel demands of interdisciplinary STEM and health careers.
